Report to Chesham LOCAL AREA FORUM

Title: Winter Maintenance 2009 – 2010

To: Chesham Local Area Forum
Special Meeting,

Date: Tuesday 13th October 2009
7.00 pm

Author & Contact Officer: Tim Fowler, Area Maintenance Manager North
Transport for Buckinghamshire

01296 383767 Email: tifowler@buckscc.gov.uk

Introduction

Winter maintenance is important in terms of both road safety and the economy. It is carried out in an effort to assist the safe movement of all users of the highway, whether in vehicles or on foot. It is economically significant because of the costs incurred by the delays and accidents that bad weather can cause.

Winter maintenance involves treating the highway to:

- (a) prevent ice from forming, known as "**precautionary salting**".
- (b) melt ice and snow already formed, known as "**post salting**".
- (c) remove snow.

Current arrangements

Transport for Buckinghamshire has a responsibility for approximately 3,300km of carriageway and 7,000km of footway. With such an extensive road network it is unrealistic to expect that all roads will be treated on a precautionary basis. Therefore roads are assessed and prioritised based on the following factors; traffic flow, route topography, bus route, adjacent key facilities, community link and collision record.

Our Priority 1 salting network is the only network salted on a precautionary basis and for 2009 – 10 it remains fundamentally unchanged from the start of last season. It is made up of A & B roads and other high priority risk assessed roads

using the above criteria. The extent of this network is approximately 1375km, which is 40% of the roads in Bucks and it is treated using 25 salt spreaders which are available 24 hours a day. Details of the roads included in the priority salting network 2009 – 2010 and advice on safer winter driving will shortly be made available on the Bucks County Council website.

The Priority 1 salting routes operate from 4 depot locations across the County and Chesham area is covered by routes out of the Amersham Depot. For normal precautionary salting these routes take between 2 & 2¹/₂ hours to complete. Severe weather can affect the treatment times of these routes. We normally aim to carry out precautionary salting outside of peak traffic hours i.e. early morning or evening. However, on occasions salting can be time critical and we will need to salt when forecast or prevailing conditions require.

Post salting is carried on our Priority 2 & 3 salting network and would only commence following a prolonged period of cold weather or snowfall, as happened in February 2009. These networks include the wider road and footway network that would not be treated as part of the Priority 1 salting network. This salting network is often referred to as our Secondary salting network. Treatment of these roads and footways will be subject to available resources and prevailing conditions on the Priority salting network.

In severe weather conditions we are able to supplement our own resources by using District and Town Council workforce, sub-contractors and local farmers.

In an average winter Buckinghamshire would use approximately 6500 tonnes of salt, which is stored in barns at the highways depots. We have storage capacity for approximately 8500 tonnes. Last winter's severe weather significantly increased Highway Authorities demand for salt and placed severe pressure on suppliers and national salt stocks. This resulted in a national salt shortage and required government intervention on to ensure supplies reached the worst affected areas. Whilst in Buckinghamshire we did not run out of salt it was necessary to temporarily reduce our priority 1 salting network and cease secondary salting to preserve salt stocks. From 7th February until the beginning of March precautionary salting was only carried out on the principal road network (A & B roads) and links to large villages.

This decision obviously severely affected many rural locations, none more so than the Chilterns, and made travel throughout the County very difficult. This was a difficult decision to make for the Cabinet Member for Transportation but was necessary to ensure the main road network remained serviceable until salt deliveries were reinstated.

In order to avoid similar circumstances in future years we have increased our salt storage by 1500 tonne using an open storage site in the South of the County.

Future arrangements

Currently Transport for Buckinghamshire are in the process of purchasing 8 new salt spreaders to replace some of the older fleet and it is hoped that they will be available from January 2010. The purchase of these new spreaders has allowed

us to consider the introduction of new salting techniques called “pre-wet”. This is a proven technique that improves the effectiveness of salting and also reduces salt usage thereby saving costs. Whilst the Priority salting network will remain unchanged for this season we will be introducing new routes that will be more aligned to the capacity and size of new fleet.

- Report ends -

Report to Chesham LOCAL AREA FORUM

Title: Local Transport Plan 3 Briefing Note

To: Chesham Local Area Forum
Special Meeting

Date: 13 October 2009

Author & Contact Officer: Ed Gurney,
Transport Policy Officer,
01296 387192,
egurney@buckscc.gov.uk

Recommendation

Chesham Local Area Forum is recommended to **note** the contents of this briefing note and give any initial feedback to the Transport Policy and Performance team.

Introduction

As the LTP3 project moves forward, Transport for Buckinghamshire need to engage with local stakeholders and members to clarify a number of issues. At this stage we want to send you a pack of information and ask you to:

- Ensure that the objectives set for LTP3 meet your needs
- Confirm that the Problems and Issues listed are accurate
- As you, at local parish level, to help prioritise strategic options
- To ask local parishes to feed back on the Have Your Say Pages of the Buckinghamshire County Council website.

Local Transport Plan

A Local Transport Plan is a transport planning document, required by Government, which sets out the Local Authority's Transport policies, strategies and priorities over the coming years.

Although previous LTPs have set out 5 year programmes this third LTP will set out the priorities and strategies covering the 15 years up to 2026, which is in line with the local planning framework

The emerging LTP will be based on evidence derived from a range of sources. It will need to describe how the County will incorporate national and regional transport agendas while focusing on local issues to create a plan for Buckinghamshire

The Process for Developing LTP3

LTP3 has to be approved and in operation by 1 April 2011. A project has been set up to ensure that the objectives are agreed and the plan is developed, consulted and written taking into account all the local issues and concerns as well as the national and regional agendas

To ensure that local people are able to properly contribute we are starting the engagement process at an early stage starting with the Transportation Symposia events in July, October and November. For the purpose of transport planning nine transport areas have been developed from the 19 locality areas. All 19 areas will receive a presentation and be able to contribute to the transport planning process

The results of this engagement will help inform the content of Local Transport Plan and help prioritise the initiatives.

LTP3 Objectives

The Government priorities are broadly similar to previous LTPs but have been adjusted to bring them in line with the requirement to **Develop a Sustainable Transport System (DaSTS)**. The priorities are now:

- 1 Reduce Carbon Emissions
- 2 Support Economic Growth
- 3 Promote Equality of Opportunity
- 4 Contribute to Better Safety Security and Health
- 5 Improve Quality of Life and Healthy Natural Environment

Issues and Problems

Using a combination of previous consultation responses, transport modelling data and census data we have compiled a list of those specific issues and problems that have been identified in each of the Local Transport Areas. It is intended to build on these to inform the development of local transport strategies to help tackle some of these local issues and problems.

Whilst we will not be directly consulting with you regarding issues and problems we will be asking whether we have missed anything from our analysis of existing information.

Option Prioritisation

At this stage of our consultation process we are asking you as stakeholders to help us prioritise the strategic options. This will help us to put into context your local issues and problems.

The role of Local Area Forums and Community Engagement Areas

The main focus of this process is to gather views on how best to prioritise the options available in your area. This gives you the opportunity to guide future spending and help progress the most important schemes for your area.

We will be asking you to circulate this information both within the forum but also to disseminate this information to your local Parishes to gain their views. We will not be holding specific meetings with Parishes therefore your help is vital to enable all views to be gathered.

Development of the LTP3 options over the next 18 months

Having worked with you to prioritise the options at this stage a full consultation will be taking place in the summer of next year (2010) which will show the preferred package of options that meet your local needs and meet the technical appraisal undertaken internally.

Following this current engagement, we will be in contact with you again with feedback through the next appropriate LAF events and then we will engage with you during the Full Public consultation.

Feedback from these early phases of consultation will be available on our website in the new year (details to follow).

We would like to thank you, in advance, for your comments, help and support with this major task.

Main contact: **Ed Gurney**, Transport Policy Officer, Transport for Buckinghamshire, 10th Floor County Hall, Walton Street, Aylesbury, HP20 1UY, Tel No. 01296 387192, email. egurney@buckscc.gov.uk

Title: 'Programme for Maintaining the Highway Asset'

To: Chesham Local Area Forum

Date: 13 October 2009

**Author &
Contact Officer:** Eric Meek, Area Manager South
0845 230 2882
emeek@buckscc.gov.uk

Recommendations

1. **Chesham Local Area Forum is recommended to NOTE:**

- The principles for compiling works programmes.
- The 2009/10 gully cleaning programme for the Chiltern & South Bucks Area. See attachment A
- The spreadsheet showing the list of works that are either completed or at the ordered stage since 1st April 2009 for the Chesham Area. See attachment B
- Members of the Chesham LAF are encouraged to identify areas of concern in respect of highway maintenance issues through their Local Area Technician.

Introduction

In these times of diminishing budgets, it is more important than ever that this Authority shows that it is getting the Best Value for Money. To this end, the new Alliance is currently setting up new ways of working utilising the new technology and innovative materials that are now available from within our Organisation.

In the past each Area Office carried out works on the whole, in isolation, using local area highways maintenance budgets which had been allocated mainly on the length of the differing categories of road in each area. This "silo" style of working did not necessarily produce the best value for money, hence the move towards Countywide programmes of work which gives a much better value by utilising economies of scale, allowing more works to be carried out for the same money.

The other major change in working methods is the move from reactive work maintenance, whereby work is only carried out once a fault has developed, to a more preventative system of works based on the use of Asset Management Plans. This allows us to manage the Asset better through a joined up approach. For example, if reactive maintenance requiring traffic management is required, then we will ensure that any cyclical and planned maintenance is also carried out using the same traffic management facilities.

In the short term, it can be difficult to realise the benefits and savings made in moving to this type of system as some works appear to take longer. However, it has been shown in other areas, both in this country and abroad that this is the most cost effective and efficient way to manage or reducing budgets.

At this stage of the new contract, we are still putting the new procedures into place that will give us the full benefits of the above systems. We are currently still using some of the old systems, and are introducing the new methods as they come on line.

A more detailed explanation and discussion can be had at the meeting on the 13th October.

Local Area Technicians:

The Local Area Technicians responsible for the Chesham LAF area is Mike Barber. He is based in the C&SB Area Office and can be contacted on 0845 230 2882.
