Appendix B – Economic Summary

The below Economic Summary has been prepared by Treasury Solutions, Capita Asset Services. Treasury Officers at the Council, supported by advice from Capita, monitor the wider economy on a daily basis as it provides the context in which the Council invests its funds and provides information on credit risk relating to the Council's money.

The wider economic picture also provides information regarding the timing interest rates may increase, impacting investment strategy and also decisions on borrowing if applicable. Most Local Authority borrowing in general has traditionally been from the Public Works Loan Board (PWLB), a Central Government lending facility, whose rates are determined by UK Gilt rates and these fluctuate based on the wider UK economic environment. Although Wycombe District Council does not have any borrowing, the economic background is important should the Council choose to borrow in future.

ECONOMIC BACKGROUND

UK. GDP growth rates in 2013 of 2.2% and 2.9% in 2014 were strong but 2015 was disappointing at 1.8%, though it remained one of the leading rates among the G7 countries. Growth improved in quarter 4 of 2015 from +0.4% to 0.7% but fell back to +0.4% (2.0% y/y) in quarter 1 of 2016 before bouncing back again to +0.7% (2.1% y/y) in quarter 2. During most of 2015, the economy had faced headwinds for exporters from the appreciation during the year of sterling against the Euro, and weak growth in the EU, China and emerging markets, plus the dampening effect of the Government's continuing austerity programme.

The referendum vote for Brexit in June 2016 delivered an immediate shock fall in confidence indicators and business surveys at the beginning of August, which were interpreted as pointing to an impending sharp slowdown in the economy. However, the following monthly surveys in September showed an equally sharp recovery in confidence and business surveys so that it is generally expected that the economy will post positive growth numbers through the second half of 2016 and in 2017, albeit at a slower pace than in the first half of 2016.

The Monetary Policy Committee (MPC) meeting on 4th August was dominated by consideration of the initial shock fall in business surveys and the expected sharp slowdown in growth. The result was a package of measures that included a cut in Bank Rate from 0.50% to 0.25%, a renewal of quantitative easing with £70bn made available for purchases of gilts and corporate bonds, and a £100bn tranche of cheap borrowing for banks to use to lend to businesses and individuals. The Bank of England quarterly Inflation Report included an unchanged forecast for growth for 2016 of 2.0% but cut the forecast for 2017 from 2.3% to just 0.8% and the forecast for 2018 to 1.8%. However, some forecasters think that the Bank has been too pessimistic with its forecasts; since then, later statistics and the sharp recovery in business surveys have provided support for this view. The Governor of the Bank of England, Mark Carney, had warned that a vote for Brexit would be likely to cause a slowing in growth, particularly from a reduction in business investment, due to the uncertainty of whether the UK would have continuing full access, (i.e. without tariffs), to the EU single market. He also warned that the Bank could not do all the heavy lifting to boost economic growth and suggested that the Government will need to help growth by increasing investment expenditure and possibly by using fiscal policy tools (taxation). The new Chancellor, Phillip Hammond, announced, after the referendum result, that the target of achieving a budget surplus in 2020 will be eased in the Autumn Statement on 23rd November.

The Inflation Report also included a sharp rise in the forecast for inflation to around 2.4% in 2018 and 2019. CPI had already started rising during 2016 as the falls in the price of oil and food twelve months ago fall out of the calculation during the year and, in addition, the post referendum 18% fall in the value of sterling on a trade weighted basis, (as at late October), is likely to result in additional upward pressure on CPI. However, this further increase in inflationary pressures will take 2-3 years to gradually work its way through the economy so is unlikely to cause major concern to the MPC unless the increases are stronger than anticipated. The MPC is, therefore, on balance, expected to look thorough this one off upward blip in inflation from the devaluation of sterling in order to support economic growth, especially if pay increases continue to remain subdued and therefore pose little danger of stoking core inflationary price pressures *arising from within* the UK economy. The Bank of England will most probably have to revise its inflation forecasts significantly higher in its 3rd November quarterly Inflation Report: this rise in inflation expectations has caused investors in gilts to demand a sharp rise in longer term gilt yields, which have already risen by around fifty basis points since mid-August. It should be noted that 27% of gilts are held by overseas investors who will have seen the value of their gilt investments fall by 18% as a result of the devaluation of sterling, (if their investments had not been currency hedged). In addition, the price of gilts has fallen further due to a reversal of the blip up in gilt prices in early August after further quantitative easing was announced - which initially drove yields down, (i.e. prices up). Another factor that is likely to dampen gilt investor sentiment will be a likely increase in the supply of gilts if the Chancellor slows down the pace of austerity and the pace of reduction in the budget deficit in the Autumn Statement - as he has already promised. However, if there was a more serious escalation of upward pressure on gilt yields, this could prompt the MPC to respond by embarking on even more quantitative easing, (purchases of gilts), to drive gilt yields back down.

USA. The American economy had a patchy 2015 with sharp swings in the quarterly growth rate leaving the overall growth for the year at 2.4%. Quarter 1 of 2016 disappointed at +0.8% on an annualised basis while quarter 2 improved, but only to a lacklustre +1.4%. However, forward indicators are pointing towards a pickup in growth in the rest of 2016. The Fed. embarked on its long anticipated first increase in rates at its December 2015 meeting. At that point, confidence was high that there would then be four more increases to come in 2016. Since then, more downbeat news on the international scene and then the Brexit vote, have caused a delay in the timing of the second increase which is now strongly expected in December 2016. Overall, despite some data setbacks, the US is still probably the best positioned of the major world economies to make solid progress towards a balanced combination of strong growth, full employment and rising inflation: this is going to require the central bank to take action to raise rates so as to make progress towards normalisation of monetary policy, albeit at lower central rates than prevailed before the 2008 crisis.

EZ. In the Eurozone, the ECB commenced, in March 2015, its massive €1.1 trillion programme of quantitative easing to buy high credit quality government and other debt of selected EZ countries at a rate of €60bn per month. This was intended to run initially to September 2016 but was extended to March 2017 at its December 2015 meeting. At its December and March 2016 meetings it progressively cut its deposit facility rate to reach -0.4% and its main refinancing rate from 0.05% to zero. At its March meeting, it also increased its monthly asset purchases to €80bn. These measures have struggled to make a significant impact in boosting economic growth and in helping inflation to rise significantly from around zero towards the target of 2%. GDP growth rose by 0.6% in quarter 1 2016, (1.7% y/y), but slowed to +0.3%, (+1.6% y/y), in quarter 2. Forward indications are that economic growth in the EU is likely to continue at moderate levels with Germany continuing to outperform other major European economies. This has added to comments from many forecasters that central banks around the world are running out of ammunition to stimulate economic growth and to boost inflation. They stress that national governments will need to do more by way of structural reforms, fiscal measures and direct investment expenditure to support demand and economic growth in their economies.

There are also significant political risks within the EZ in as much as Spain has held two general elections since December 2015 and still been unable to form a functioning government holding a majority of seats, while the Netherlands, France and Germany face general elections in 2017. A further cause of major political tension and political conflict, is one of the four core principals of the EU – the free movement of people within the EU, (note – not in just the Eurozone common currency area). In addition, Greece has been a cause of major concern in terms of its slowness in delivering on implementing fundamental reforms required by the EU to reduce its budget deficit in exchange for the allocation of further bailout money.

Another area of major concern is that many Italian banks are exposed to substantial amounts of underperforming loans and are undercapitalised. Some German banks are also undercapitalised, especially Deutsche Bank, which is under threat of major financial penalties from regulatory authorities that will further weaken its capitalisation. What is clear is that national governments are forbidden by EU rules from providing state aid to bail out those banks that are at risk, while, at the same time, those banks are unable realistically to borrow additional capital in financial markets due to their vulnerable financial state. However, they are also 'too big, and too important to their national economies, to be allowed to fail'.

Asia. Economic growth in China has been slowing down and this, in turn, has been denting economic growth in emerging market countries dependent on exporting raw materials to China. Medium term risks have been increasing in China e.g. a dangerous build up in the level of credit compared to the size of GDP, plus there is a need to address a major over supply of housing and surplus industrial capacity, which both need to be eliminated. This needs to be combined with a rebalancing of the economy from investment expenditure to consumer spending. However, the central bank has a track record of supporting growth through various monetary policy measures which further stimulate the growth of credit risks and so increase the existing major imbalances within the economy.

Economic growth in Japan is still anaemic, and skirting with deflation, despite successive rounds of huge monetary stimulus and massive fiscal action to promote consumer spending. The government is also making little progress on fundamental reforms of the economy.

Emerging countries. There are also concerns around the vulnerability of some emerging countries which are particularly exposed to the downturn in demand for commodities from China or to competition from the increase in supply of American shale oil and gas reaching world markets. Financial markets could also be vulnerable to risks from major sovereign wealth funds of those countries that are highly exposed to the falls in commodity prices from the levels prevailing before 2015, especially oil, and which, therefore, may have to liquidate substantial amounts of investments in order to cover national budget deficits over the next few years if the price of oil does not return to pre-2015 levels.

Brexit timetable and process

- March 2017: UK government notifies the European Council of its intention to leave under the Treaty on European Union Article 50
- March 2019: two-year negotiation period on the terms of exit. This period can be extended with the agreement of all members i.e. not that likely.
- UK continues as an EU member during this two-year period with access to the single market and tariff free trade between the EU and UK.
- The UK and EU would attempt to negotiate, among other agreements, a bi-lateral trade agreement over that period.
- The UK would aim for a negotiated agreed withdrawal from the EU, although the UK may also exit without any such agreements.
- If the UK exits without an agreed deal with the EU, World Trade Organisation rules and tariffs could apply to trade between the UK and EU - but this is not certain.
- On exit from the EU: the UK parliament would repeal the 1972 European Communities Act.
- The UK will then no longer participate in matters reserved for EU members, such as changes to the EU’s budget, voting allocations and policies.
